OVERVIEW

Full-stack engineer with production experience building and optimizing web applications end-to-end. Focused on backend performance, clean architecture, and shipping features that hold up at scale. BS in Computer Science, May 2026.

EDUCATION

CUNY Brooklyn College

Bachelor of Science in Computer Science

- **GPA:** 3.6/4.0

Expected May 2026

New York, NY

EXPERIENCE

Software Engineer Intern

June 2025 – Present

Soaper

Remote

- Shipped full-stack features across a React/TypeScript and FastAPI stack; optimized API layer to reduce p95 response times from 140ms to under 20ms and cut frontend latency by 25%.
- Designed and implemented a multi-parameter radiology search feature using indexed PostgreSQL queries over 120K+ rows, accelerating data entry workflows by 40%.
- Collaborated with physicians and cross-functional teams in an Agile environment to ship 15+ production features, helping grow the feature surface of a live EMR used in real patient-facing environments.

Infrastructure QA Engineer Intern

May 2025 – Aug 2025

NYC Department of Education

New York, NY

- Deployed and configured servers, IP-based systems, and desktop images across NYC schools, conducting 10+ technical walkthroughs per school to validate setup and ensure readiness.
- Built Python automation scripts for server rollouts and on-site diagnostics across 5 boroughs, cutting per-school setup verification from 90 min to 25 min.

PROJECTS

Scorva | *React, Tailwind CSS, Express.js, Redis, Supabase, PostgreSQL, Prisma, OpenAI, Jest*

- Designed a normalized PostgreSQL schema serving 293K+ stat rows across multiple sports leagues via a React + Express stack deployed on Vercel and Railway.
- Architected a two-tier live sync system: a 15-second fast path for scoreboards and a 2-minute path for full box scores, with Server-Sent Events for real-time push and automatic REST fallback on connection failure.
- Designed tiered Redis caching (30s–30d TTLs) across 8 endpoints, reducing average response time by ~60%; implemented auth with Google OAuth popup flow, JWT middleware, Supabase signup webhook, and two-step cascading account deletion.

SoaperNote | *React, TypeScript, FastAPI, Firebase, Firestore, Stripe, OpenAI, WebCrypto API*

- Built a full-stack clinical notes web app with AI-powered audio transcription via OpenAI Whisper and GPT-4o-mini-generated SOAP notes with dynamic template selection.
- Implemented client-side AES-GCM 256-bit encryption using the WebCrypto API to protect audio data in IndexedDB, with per-user key isolation via Firebase UID binding.

Recvr | *Next.js, TypeScript, Supabase, PostgreSQL, Prisma, Redis, OpenAI, Groq, Vitest, Playwright*

- Built a real-time recovery engine computing per-muscle fatigue from a 96-hour rolling window — volume-adjusted decay curves, cumulative fatigue stacking, and HSL-interpolated SVG body maps. Cached in Redis (5-min TTL), cutting 80% of redundant DB reads
- Streamed AI suggestions via NDJSON with chunk-boundary-safe parsing, integrated Groq Whisper for voice logging, and enforced Redis-backed cooldowns and rate limiting (10 req/hr), cutting redundant AI calls 90%.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C++

Backend: Node.js, Express.js, Next.js, Nest.js, FastAPI, PostgreSQL, Redis, REST API, CI/CD, Prisma, SQLAlchemy, Jest, Playwright, Pytest

Frontend: React, React Native, Expo, Tailwind CSS

Tools & Platforms: Git, GitHub Actions, Vercel, Railway, Firebase, Supabase, Stripe, OpenAI, AWS
