OVERVIEW

Full-stack software engineer shipping production features daily in a live healthcare EMR platform. Strong backend focus: FastAPI, PostgreSQL, Redis, and Node.js. Experienced building scalable APIs, data pipelines, and React frontends in Agile teams.

EDUCATION

CUNY Brooklyn College

Bachelor of Science in Computer Science

Expected May 2026

New York, NY

- **GPA:** 3.6/4.0
- **Relevant Coursework:** Data Structures & Algorithms, OOP, Databases, Computer Architecture, AI

EXPERIENCE

Software Engineer Intern

June 2025 – Present

Soaper

Remote

- Shipped full-stack features across React/TypeScript frontend and FastAPI backend, reducing p95 API response times to under 20ms and cutting frontend latency by 25%.
- Designed and implemented a multi-parameter radiology search feature using indexed PostgreSQL queries over 120K+ rows, accelerating data entry workflows by 40%.
- Built a reusable component library of 12+ TypeScript/React components, reducing estimated development time for new features by 30%.
- Collaborated with physicians and cross-functional teams in an Agile environment to ship 15+ production features, helping grow the feature surface of a live EMR used in real patient-facing environments.

PROJECTS

Scorva | *React, Tailwind CSS, Express.js, Redis, Supabase, PostgreSQL, Prisma, OpenAI, Jest*

- Designed a multi-league PostgreSQL schema (7 tables, 9 migrations) storing 293K+ stat rows across 8.6K games and 6.3K players, served via a React + Express full-stack app deployed across Vercel and 5 Railway services.
- Architected a two-tier live sync worker: a 15-second scoreboard fast path and a 2-minute full boxscore path, pushing updates via Server-Sent Events with pg_notify as the trigger and automatic REST fallback after 3 SSE failures.
- Designed tiered Redis caching (30s–30d TTLs) across 8 endpoints, reducing average response time by ~60%; implemented auth with Google OAuth popup flow, JWT middleware, Supabase signup webhook, and two-step cascading account deletion.
- Wrote Jest and Vitest test suites covering 475+ test cases across API routes, SSE lifecycle, Redis cache, data ingestion pipeline, and frontend hooks; integrated OpenAI for auth-gated game summaries with persisted cache at ~\$0.0001/summary.

SoaperNote | *React, TypeScript, FastAPI, Firebase, Firestore, Stripe, OpenAI, WebCrypto API*

- Built a full-stack clinical notes web app with AI-powered audio transcription via OpenAI Whisper and GPT-4o-mini-generated SOAP notes with dynamic template selection.
- Implemented client-side AES-GCM 256-bit encryption using the WebCrypto API to protect audio data in IndexedDB, with per-user key isolation via Firebase UID binding.
- Integrated Stripe subscriptions with webhook handling for 5 billing events (checkout, creation, updates, cancellation, payment); built a referral system with usage-based note quotas.
- Wrote 115+ pytest functions across 15 test modules covering endpoints, services, Stripe integration, auth, and edge cases with Firebase and Stripe mock fixtures.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C++

Backend: Node.js, Express.js, FastAPI, PostgreSQL, Redis, REST APIs, Prisma, SQLAlchemy, Jest, Pytest

Frontend: React, React Native, Expo, Tailwind CSS, Framer Motion

Tools & Platforms: Git, GitHub Actions, Vercel, Railway, Firebase, Supabase, Stripe, OpenAI, AWS
